Automation Test Engineer (Multiple Openings)

Description

The Sr. Automation Tester (Quality Assurance role) assesses software quality through manual and automated testing. The Sr. Tester has experience working with developers, end users and organizations to create test plans and test scripts, coordinate with test sites and other team participants to plan test events and experienced in creating reports. The Sr. Tester tracks problems and reports on errors that are identified. Tester must have experience with configuring necessary hardware and operating environments as needed to complete assigned testing and have comprehensive technical expertise on IT products, operating systems, software, hardware, systems and networks and specialized environments. The Sr. Tester writes or assists in the development of test plans and test procedures. The Sr. Tester manages the defect database under the guidance of senior engineers and traces requirements are verified and validated. Ultimately, the Sr. Tester will ensure that products, applications and systems work correctly. Remote work allowed.
