## Salesforce Service Cloud Administrator

### Description

The candidate will work as a member of our team. The candidate will be responsible for implementing systems in support of Salesforce platform application initiatives including Salesforce module solution design, Salesforce screen and workflow configuration, object model design and configuration, data sharing and visibility control implementation, and general system administration. The candidate will work with our clients and other team members to gather requirements, document solution design, configure the Salesforce application, and ensure successful engagements and production releases.

The Administrator will help define architecture and design criteria to be applied across all implementations, and the processes and mechanisms to support and develop those implementations. The Administrator will use agile techniques to plan and implement system modifications and will determine necessary data structures, processing procedures, and appropriate output to meet user needs. The Administrator will communicate to both technical and non-technical audiences using diagrams and exhibits to effectively document and describe architectures, designs and solutions. The Administrator will collaborate closely with the Project Management Office and Business Analyst team to ensure alignment with department and enterprise roadmaps.

### Education

Bachelor's Degree in a business or technical discipline; Masters Preferred, Certifications Highly Preferred

### Experience

3 years, or 5 years of additional relevant experience may be substituted for education

### Qualifications

#### Minimum Qualifications:
